

Quest 1:

Error based questions

Question no 1:

- Private variables can't be accessed directly by any other class but in this code, we are trying to directly access "value".
- In constructor, we use "inp.nextFloat()" but we use "inp.nextInt()"

Question no 2:

- Java does not support multiple inheritance, meaning a class cannot extend more than one class. But in this code, we try to inherit GrandChild1 and Grandchild2 from Child.
- When we use the constructor of parent class in sub class we use "super" keyword.
